

Catalina Jaramillo

AI Commerce & Automation Strategist | Founder-Operator | DTC Growth & Operations

I design systems that turn conversations, workflows and operations into measurable growth.

Pereira, Colombia · Remote LATAM & Global · clients@soycatalinajaramillo.com · soycatalinajaramillo.com · portfolio-nine-lovat-18.vercel.app

I do not only propose strategies. I build the systems that make them work.

Profile

Founder-operator with 15+ years across sales, customer experience, ecommerce, operations and growth. I connect business context with implementation to design AI agents and automation systems around real commercial workflows: lead intake, follow-up, WhatsApp conversations, ecommerce operations, human handoff, reporting and decision support.

What I bring

AI Agents & Automation

Workflow orchestration, APIs, webhooks, n8n-level automation, state, retries and human-in-the-loop design.

Commercial Systems

Lead qualification, follow-up, CRM-style routing, WhatsApp sales/CX and conversion-oriented operations.

Ecommerce Operations

Shopify, COD confirmation, logistics, customer support and post-purchase continuity.

Founder Perspective

I design from the business problem first: what should happen, what can fail and what should improve.

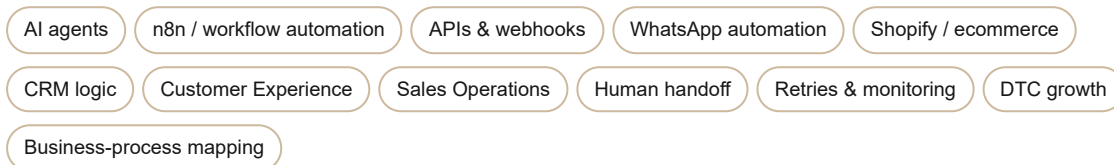

Selected systems

- **LAURA** — AI commerce/CX operating system for WhatsApp sales, customer support, follow-up, order continuity, COD confirmation, post-purchase workflows and human escalation.
- **CAROLINA** — AI acquisition and opportunity system for discovery, prospect research, fit scoring, personalized applications/proposals, inbox classification, follow-up, scheduling and evidence-based reporting.
- **Ecommerce Operations** — operating logic connecting Shopify, order states, logistics, support and post-sale workflows.
- **Growth & Creative Intelligence** — campaign reading, hooks, angles, testing signals and decision support.

Business proof

- Founder and operator of Professional Glam / Piel y Glamour since 2018.
- 9,000+ ecommerce orders and more than COP 1B in cumulative Shopify sales according to verified exports.
- Experience leading teams, sales, customer experience, operations, logistics, marketing and retention.
- Built operational systems used around a real DTC business, not only demo automations.

Core capabilities

Best-fit roles / projects

AI Commerce Operations · AI Automation / Workflow Strategy · Growth Operations · Customer Experience Automation · Ecommerce Operations · Fractional AI systems work · White-label partnerships for agencies.

Language & international collaboration

Native Spanish. Basic spoken English. I use real-time AI interpretation for live meetings and AI-assisted written communication, allowing me to collaborate effectively with international teams while being transparent about my spoken-English level.

Working style

I do not start with the tool. I start with the process: where time, money, context or follow-up is being lost; then I design the automation around the real operating workflow. I prefer to show transferable capability and systems built rather than claim technical experience I cannot prove.
